Reliable, Effective Solutions for Meeting Clean Air Objectives

Terra Environmental Technologies Selects National Energy Equipment for Canadian Customer Support

April 13, 2010—Terra Environmental Technologies Inc. (TET) has selected National Energy Equipment Inc. (NEE) as the equipment and service provider for its Canadian TerraCair® Ultrapure DEF¹ customers.

NEE offers a complete range of DEF and fueling equipment specifically suited for the Canadian market, to cover applications from distribution and transport to fleet, commercial service and retail business needs. NEE has the technical expertise and nationwide resources to supply and service DEF equipment for the entire TerraCair supply chain and customer network.

“TET’s commitment to guarantee TerraCair quality from manufacturing plant to customer vehicle will be supported by the excellent products and services National Energy Equipment has available throughout Canada, with their extensive network of resources and customer service in every province,” says John Lounsbury, TET’s Director of Marketing.

Says Tiina McCombie, NEE’s National Petroleum Director, “Our core business is distribution and service for energy fuels related equipment across all market segments. Supporting DEF with reliable equipment, systems integration and training for our customers, employees and national business partners is an important development we have recognized and invested in to ensure appropriate and timely availability for the industry.”

As a leading North American Diesel Exhaust Fluid (DEF) producer, TET has developed a complete supply chain solution that includes manufacturing and distributing the product, recommending DEF compatible dispensing equipment, offering financing options and providing field services and employee training.

1. All diesel vehicles sold in the U.S. and Canada are required to meet stringent emissions standards. Most manufacturers accomplish this by using SCR technology. DEF is a liquid urea solution that, when used in conjunction with SCR, converts harmful emissions to pure water and nitrogen. TerraCair® Ultrapure DEF is an ultrapure urea solution whose quality is certified by the American Petroleum Institute.

TerraCair is available in a variety of package sizes and dispensing configurations.

About TET

TET, an indirect, wholly-owned subsidiary of CF Industries Holdings, Inc. (NYSE: CF), provides emissions control solutions, offering nitrogen-based products (reagents) including anhydrous ammonia, ammonium hydroxide, and liquid and dry urea; and a broad range of technical, engineering and logistical services. TET serves two discrete customers: stationary and mobile. Stationary customers include coal-fired power plants and other large industries seeking to reduce NOx emissions. Mobile customers include all businesses involved in supplying diesel exhaust fluid to consumers who use it to reduce harmful emissions from the exhaust stream of diesel engines, including automotive fluid distributors, truck stops, a variety of retail outlets and original equipment manufacturers. TET was incorporated in 2007, and has access to the full range of CF Industries resources. Terra Environmental Technologies' Web site is at www.tet-terra.com.

About NEE

National Energy Equipment Inc. is the largest nationwide distributor of fluid and gas handling equipment for energy-related industries in Canada. 13 branches with over 360 employees serve every major market and geographic location coast to coast. NEE provide sales, service and technical support for the world's leading equipment manufacturers for petroleum, propane and related products. NEE is the industry leader in Canada and is dedicated to operational excellence and customer service.
